Thanks Mike! So if I have this correct, if they tested with ASTM values must be below 3.75 g/hr and 3.0 g/hr for units tested with M28R.

Hi Lisa,

Look on Page 13709 of the rule. You will see section 60.534. Look a few paragraphs before this section on the same page under heading (3) Revocation of certification (i). This is section 60.533 but near the end before 60.534 begins. It states that if an audited stove using same test methods as was certified is greater than 50 percent of the standard, certification will be revoked for 72 hours.... You can read the rest.

Hi Mike, Random Compliance Audit question. How much are the appliances allowed to deviate from the original result without triggering additional testing or other EPA activity?

Thanks in advance for your help!
Lisa
